Literature Summary and Reference Context

Reference	Main Contribution / Relevance	Connection to This Project	Limitation to Consider
LeCun et al. (1998) *Gradient-Based Learning Applied to Document Recognition*	Demonstrated convolutional neural networks for visual pattern recognition.	Provides foundational justification for learning spatial features directly from images.	Focuses on document and character recognition rather than dynamic hand gestures.
Krizhevsky et al. (2012) *ImageNet Classification with Deep Convolutional Neural Networks*	Showed the high effectiveness of deep CNNs for large-scale image classification.	Supports using convolutional feature extraction for a multi-class image classifier.	Large-scale ImageNet setting differs significantly from a smaller RPS dataset.
Moroney (2019) *Rock, Paper, Scissors Dataset*	Provides labeled rock, paper, and scissors hand-gesture images.	Directly related task/domain reference; cite only if utilizing this public dataset.	Dataset documentation indicates images were generated via CGI, which may not fulfill real-world data collection requirements.
TensorFlow Datasets *rock_paper_scissors catalog*	Documents the dataset schema and official train/test splits.	Useful for dataset metadata, pipeline consistency, and reproducibility.	Shares the same CGI-data constraint; should not be framed as an independent real-world webcam dataset.
Natalia SFT *Rock-Paper-Scissors Image Classification (GitHub)*	Practical example of applying a CNN architecture to RPS hand images.	Useful as an implementation benchmark and reference for standard workflow choices.	GitHub repository; does not constitute a peer-reviewed research paper.
